5. Accessories

1. Overview Basics

This water cooling system is assembled very space saving on a custom made carrier. The system operates extraordinary silent and is of course very reliable. It is designed for continuous duty.

2. Advise for use

The cooling system should be operating on a solid, level and plane surface. Please take care, that the intake for the cool air is not barred or sealed. The flexible tubes for the cooling liquid have to have enough space and should not be buckled. Furthermore there has to be enough space above the cooling system to refill it with cooling liquid.

3. Technical Data

- Thermal Resistance Standard: approx. 0.06K/W
- Connection Thread: 2 x G1/4"
- Cooling Capacity: approx. 400W
- Use for up to max. +60°C Media-temperature
- Measure: 155x162x202mm(LxWxH)
- Pump: max. 2.6mWs 350l/h
- Current Supply: 12V DC 8W (1A)
- Fan 12V 2.15W 120m³/h

TEMPERATURMANAGEMENT

5.) Accessories:

In order to retrofit the cooling system are various connection parts available. Further chillers are easily to connect into the circuit.
